EDUCATION

Degree / Certificate	Institute / Board	CGPA / Percentage	Year
B.E. (Electrical Engineering)	Jadavpur University	7.40	2027
Senior Secondary (Class XII)	WBCHSE	80%	2021
Secondary (Class X)	WBBSE	84%	2019

TECHNICAL SKILLS

Languages: C, C++, Java, Python, JavaScript, TypeScript, SQL

Frontend/Tools: React.js, Next.js, Redux Toolkit, Tailwind CSS, GSAP, Motion, Git, GitHub, VS Code, Postman, Linux

Backend: Node.js, Express.js, REST APIs, JWT Auth, NextAuth, OAuth, Rate Limiting

AI/LLM: LangChain, LangGraph, Qdrant (Vector DB), RAG pipelines, Agentic workflows, MCP

Databases/ DevOps & Cloud: PostgreSQL, MySQL, MongoDB, Redis, Docker, Docker Compose, AWS, GitHub Actions, CI/CD

CS Fundamentals: Data Structures & Algorithms, OOP, OS, DBMS, Computer Networks, System Design Fundamentals

PROJECTS

SOEN | *MERN, SOCKET.IO, WEBCONTAINER, GROQ* **Code** **Live Demo**

- Built a real-time collaborative code editor using the MERN stack and Socket.IO, enabling multiple users to edit shared project files simultaneously with live sync, in-app chat, and JWT-based authentication.
- Integrated an AI coding assistant (@soen) powered by Groq's LLM API, using structured JSON-schema output to reliably generate and inject complete file trees directly into a live project.
- Implemented in-browser code execution using WebContainers and xterm.js, giving users a sandboxed Node.js terminal and live preview without any server-side execution or local setup.

SOENCHAT | *MERN, Docker, AWS, RAG system* **Code** **Live Demo**

- Architected SOENCHAT, a **microservice-based** AI platform (inspired by ChatGPT/DeepSeek) with independently deployable auth, chat, agent-routing, and billing services, using an API gateway and shared Redis layer for session management, caching, and rate limiting.
- Built a full-stack conversational AI product with intelligent agent routing, web search, PDF/PowerPoint/image/code generation, Google Sign-In (JWT), and Razorpay subscription billing — using React 19, Redux Toolkit, Node.js/Express, and MongoDB.
- Designed and automated a full AWS deployment pipeline, containerizing backend services with Docker and deploying via ECS/ECR, with GitHub Actions CI/CD auto-deploying backend changes to ECS and frontend builds to S3 + CloudFront on every push to main.

Convolution XI – Official Tech Fest Platform | *Next.js, TypeScript, MongoDB* **Code** **Live Demo**

- Built the complete authentication system for Convolution, JU's annual tech fest website — including Nodemailer/SMTP-based email verification (registration triggers a verification link redirecting to login), a secure forgot/reset password flow, and Google Sign-In via NextAuth.js.
- Deployed and maintained a production authentication system on Hostinger that has reliably onboarded 1,000+ registered users across a Next.js + Tailwind CSS platform for a multi-event tech fest

SnapCart – Full-Stack Grocery Delivery Platform | *Next.js, TypeScript, MongoDB, Socket.io* **Code** **Live Demo**

- Built a production-ready digital platform providing seamless end-to-end shopping. Developed a dedicated management dashboard mirroring industrial data monitoring architectures.
- Integrated Socket.io for real-time map tracking, enabling customers to view the live geographic location of their delivery personnel throughout the order lifecycle.
- Implemented secure authentication and authorization flows utilizing NextAuth and OAuth, ensuring safe session management and seamless user logins across all profile types.

ACHIEVEMENTS

Algorithmic Problem Solving: Solved 700+ problems on LeetCode, demonstrating strong analytical and algorithm optimization skills.

Consistency & Discipline: Successfully completed a 60-Day Problem of the Day (POTD) Challenge and solved 150+ problems on GeeksforGeeks. [certificate]

Team Collaboration: Actively collaborated with department peers and team leads via GitHub version control workflows to successfully launch the Convolution XI platform.
